

What is the best research paper writing service?

Due to the spread of the coronavirus, offices are closed for quarantine. The abrupt stop of the work of many enterprises leads to serious consequences in the economy. To save the workflow, many companies offer employees to work remotely during quarantine at home, using various remote programs to organize work.

What is the best research paper writing service?

APPS FOR REMOTE TEAM WORK

Consider the most useful programs for remote work at home. A team that works remotely on the same project needs file sharing. Internet clouds are ideal for this.

[Best Research Paper Writing Service: Top 5 Companies](#)

GOOGLE DRIVE

Google is offering you 15 GB of storage for free. This is quite enough to place the necessary documents there and exchange files with colleagues.

In addition, the Google world provides the user with documents, spreadsheets, a calendar, presentations, and even online learning.

DROPBOX

In addition to the convenient function of exchanging data and files, Dropbox offers all the programs necessary for remote work available within the service:

- File storage and content aggregation. You can use the website or download the program on a PC;
- Creating context for meetings, intelligent search quickly provides access to the files you need;
- Notification of changes in shared files and a special tool for collective work with documents;
- Synchronization of data linked to your account, plus synchronization of joint data;
- Working group management is convenient for company managers.

ONEDRIVE

Cloud storage from Microsoft. OneDrive offers file protection, access to them from any device, data sharing, the ability to work with data offline, and expiration links. All this can be easily used to simplify quarantine cooperation.

While working remotely, it is important for the team to maintain communication and reporting. The best solution to these problems is video conferencing software. For example, you can hold a rally in

the morning, plan the team's tasks for the day, and then call again in the evening so that everyone talks about the work done. If your team works remotely only for the duration of the quarantine and does not want to pay money for using video calling applications, then we recommend Zoom and Google Hangouts.

ZOOM

In the market of video messengers (if these programs can be called that) there is not only Skype. Each with its own benefits. For example, the free version of the Zoom service allows you to create conferences for up to 100 participants. Duration - up to 40 minutes. One participant acts as the host and invites others to the call. For the simplest meeting, this is quite enough.

If you want more, the paid subscription offers unlimited call duration and reporting.

GOOGLE HANGOUTS

The free application for users allows you to create chats and video meetings with participants in a specific conversation. This service is suitable for small teams, as it allows you to connect no more than 15 people in one call. You can chat during the conference, share the screen with other team members.

The next must-have tool for remote work is a time tracker. Time tracking is simply necessary when the team works remotely and the manager or team leader does not know what exactly each subordinate does during the working day. Using the time tracker shows the exact number of hours a team spends on work per day. We offer you 2 programs: Checkiant and Toggl.

CHECKIANT

Checkiant's simple time tracker makes it easy to start effective personal and team time tracking. The manager creates the necessary clients and projects, and each employee just needs to start the timer while working on their tasks. Checkiant Benefits:

- ease of use, beautiful and unloaded design;
- a system of various reports;
- system of subordinates and advanced editing of accesses;
- synchronization of active browser tabs;
- saving the history of previous rates.

TOGGL

The popular classic Toggl time tracker is suitable for both team and individual use. Among the main functions are:

autotracking, tracking reminder;

creating and managing reports;

using the Pomodoro method;

creating teams and user groups.

TEAMVIEWER

Working in an office has the advantage and disadvantage at the same time - the ability to approach a colleague at any time and ask for help. This is not possible while working remotely. Therefore, team members use programs to remotely control a computer.

TeamViewer is a very common program that allows you to control another computer with a password. Don't need any special settings, easy to figure out how to use. Just an indispensable thing when you need to ask for help in writing code or check out any other local project.
